

Diagnostic Tool TC

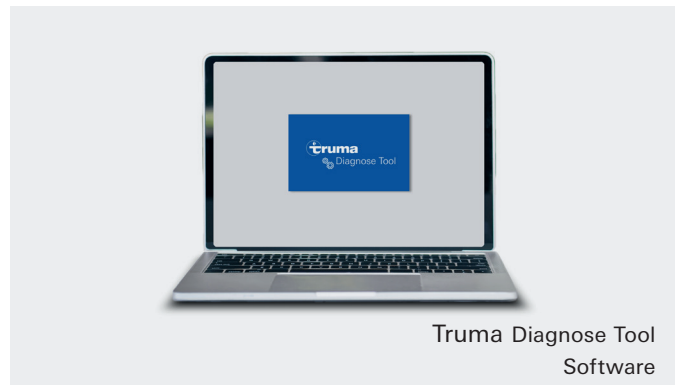

OEM **Retail** Product information 06/24

The Diagnostic Tool TC can be used to read out the error and statistics memory of Truma devices, both via TIN and CAN-BUS. These errors are clearly identified in the Error Explorer and appropriate troubleshooting measures are displayed directly. The live display function enables states and data to be displayed, analysed and controlled in real time.

Faults can thus be detected and eliminated more quickly. The Truma Diagnose Tool Software is kept up to date automatically via the Truma Cloud. Locked electronics can also be unlocked if required. The Diagnostic Tool TC thus enables fast, precise repairs and thus contributes to a high level of customer satisfaction.

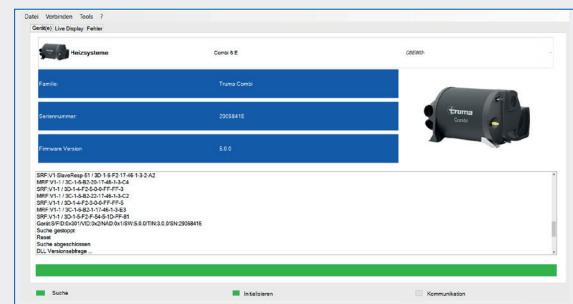

Diagnostic Tool TC
Hardware

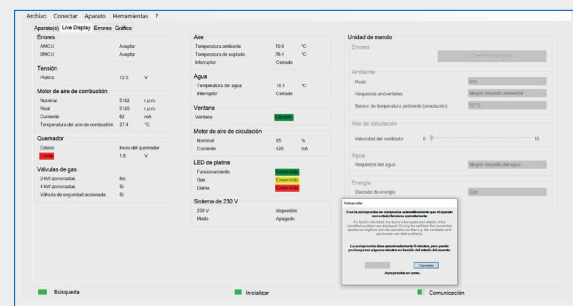

Truma Diagnose Tool
Software

Benefits

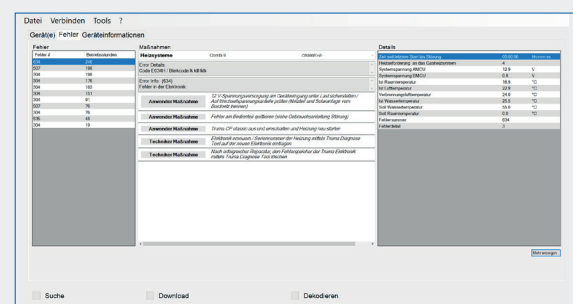

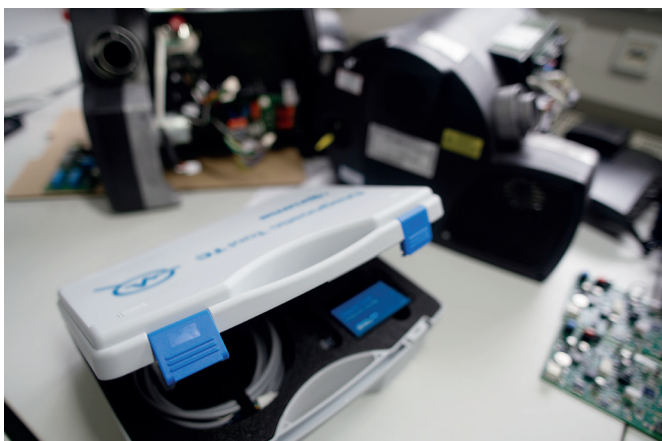

- **Future-proof:** Reliably read both existing and future devices
- **Practical:** Robust case for storing all the hardware included in the scope of delivery
- **Well-thought-out:** Integrated CAN terminator and reset mechanism for Truma VarioHeat errors
- **Simple:** Only one USB-C cable is required

user interface

Multilingual user interface
